

The invention relates to teaching-training means. Simulator has body, simulator of cabin with working places of commander and gun-layer, and gun simulator. To simulator regular units are included: charging mechanism, control block of mechanism of breeching, simulator of commander's sight, simulator of gun-layer's sight, simulator of commander's hatch, simulator of gun-layer's hatch, weight-dimension dummy missiles and simulator of gun breech-mechanism. Gun simulator is arranged as pipe with charge case to place dummy missiles. Commander's panel, simulator of commander's sight, simulator of gun-layer's sight and simulator of breech mechanism are connected to control block of breeching mechanism.
