

Wall module comprises of at least two blocks. To increase strength of the wall module and the brickwork in the whole the blocks are arranged in different form. The first of the blocks is made as a rectangular parallelepiped with one trapeze hackle in the upper part, and two trapeze slots in the lower part. The second block is arranged as a rectangular parallelepiped with two trapeze hackles in the upper part and one trapeze slot in the lower part. Axes of symmetry of the slots and the hackles of each of those blocks are mutually normal.
