

The invention relates to a herbicide - a new chemical compound, which according to the structure thereof is close to structures, which have shown themselves in controlling weeds of mono- and dicotyledonous species, and are 5-(4-methylphenyl)-4-phenyl-1,2,4-triazole-3-thioether of 2,4-dichlorophenolacetic acid. It allows to carry out an effective control over wild grown narcotic-bearing plants of the Papaveraceae family and hemp.
