

A device for mounting working elements purposed for operation in inter-stem strips of a garden, which includes transversal and longitudinal bars, connected between each other by a cylindrical hinge with the vertical axis of rotation. The transversal bar is mounted on a trimeric mounting system of a tractor, and the end of the longitudinal bar, whereon a working element is mounted, is connected with the tractor frame with the aid of a rigid link of a variable length, which is arranged on the two ball and socket joints.
