

Disclosed is a bonding method consisting in bonding by means of a glue layer a body made of a first material to a plastic body (5), said glue layer (V) being characterized by its multilayer structure, i.e. a soft internal acrylate-based layer (4) and heat seal peripheral layers (2). Said layers, i.e. the former one and the latter ones, border upon the first body (1) or plastic body (5), an intermediate layer (3) being inserted between the peripheral layers (2).
