

Mobile trans-shipping complex includes a catamaran composed of ship hulls with the help of a connecting bridge, beam, service platform with a hole, sides, thus catamaran pontoons are mounted with possibility of arrangement of a transport ship in the space, for example, a barge for direct loading of cargo by self-floating of cargo from carriages into the hold, the carriages being transported from the bank on rails and wedge pontoon that is connected with platform. Catamaran platform is manufactured from the hull of \sqcup -shaped ship. An additional pontoon is connected to the catamaran board thus forming a trimaran, the platforms of said trimaran are connected with the bank by additional wedge pontoon and rails have a Y-track. Method for manufacture of complex includes fastening of pontoons to form a catamaran. \sqcup -shaped pontoon is turned over for 180 degrees near which is located an additional pontoon and platform is mounted on catamaran pontoons afloat.
