

The invention relates to titanium alkoxy derivatives that are partially hydrolytically condensed of general formula:

wherein: R – acyclic saturated normal or isomeric alkyl of C₁-C₄ series or partially -R';

R' – acyclic saturated normal or isomeric structure alkyl of C₆-C₂₃ series;

x = 0,1-3;

n = up to 30,

with content of OR alkoxy groups of C₁-C₄ series from 60 to 1.5 wt.%, as oil-wetting agents of cellulose-containing materials and articles thereof. The invention further relates to a formulation for the impregnation containing above-mentioned compounds and solvent.
