

The invention relates to special arrangements made of plastics that are structurally connected to roofs, in particular for plastic roof materials and sheets of glass and polycarbonate, and deals with lock-clip. A clamp fastener comprises a main body, clamp plate with spherical clamp that is made of plastic material as three-dimensional strips, fixing clamp with holder, hinge, bolt of hinge and tightening bolt intended for installation to the side grooves of the lock body and for pressing with tightening bolt till the catch of the body groove of the lock bolt completely presses spherical clamp of the clamp plate. The main body has inside one or two round catches of groove and conical grooves at sides intended for installation of the fixing clamp, and on the upper horizontal surface of the main lock body and the lower horizontal surface of the clamp plate with spherical clamp semi-round edges of the damp-proof gasket are placed. Additionally the clamp fastener can have intermediate body.
