

The invention relates to a method for producing a visible covering (1), comprising the following steps: mixing a stabilizer with a granular material (2), pouring the granular material (2) into a receptacle (3) thereby forming a molded body (4), bonding at least one surface layer (9) of the molded body to a substrate layer (10), and lifting off the composite comprising the surface layer (9) and the substrate layer (10), wherein the visible covering (1) is obtained. The invention further relates to a visible covering (1) produced by means of the method according to the invention and to the use thereof as a facing of ceilings, walls, floors, doors, roofs, and/or tabletops.
