

The invention relates to explosives and can be used in the preparation of emulsion explosives. An emulsion explosive contains ammonium nitrate aqueous solution, emulsifier, acetic acid, thiourea and gas-generating additive based on sodium nitrate. It further contains porous or granulated ammonium nitrate, and mixture of modified plant oil and industrial oil is used as an emulsifier, emulsified aqueous solution of sodium nitrite and urea is used as a gas-generating additive. The invention makes it possible to enhance properties of emulsion explosive.
