

A package (24; 124; 224) for tobacco products or tobacco related commodities or smoking devices includes an RFID tag (10; 110) which comprises a sealing portion (14) and is embedded in or attached to the package. The sealing portion (14) is destroyed when the package is opened. The RFID tag is configured to transmit, on request of a reader device (34), a status information indicating whether the sealing portion (14) is intact or has been destroyed.
