

The proposed clock contains a decorative casing, a mechanical or electronic timing counter, which is installed in the casing, a dial-plate, hands, and a protective screen made of transparent material. The clock may contain a device for generating a sound warning signal. The casing is designed as a simulator of a technical facility, building, natural object, or object created by a human being, or as a three-dimensional geometric figure or a combination of such figures. Colors of the parts of the casing that is designed as the simulator of an object, may correspond to, or differ from, the colors of the real object.
