

A mechanism for the application of coatings contains bath, vertical column with rotary console, blocks with cables enveloping them and connected to cross-arm, to which fixed are rods for placement of pieces. In the bath disposed are graphite cups, the cross-arm has radial slits made therein to which inserted are rods for the placement of pieces and fixed with locknuts. The cross-arm is connected through electrically isolated boss and rod to the rail mechanism passing through pilot holes of support of rotary console, and is connected by means of cable and blocks with counterweight.
