

A slide dispenser has a body and a slide with working edges installed in central opening of the body with placed in it in direction from the ends of the body to the center and connected, respectively, to discharge, additional channels and pockets, and the pockets connected to supercharge, supplementary and additional channels. The pockets connected to the supercharge channels are through inlet channels and back valves connected to supplementary channels. On the slide, at its cutoff edges, throttling slots are provided, as cylindrical reborings with variable cross-section in the lengths of those.
