

A slider of zipper contains upper and lower covers connected by a crossbar which have boards. The crossbar and boards of both covers form Y-like hollow. In the upper cover an intermediate with a slotted cam is installed. The last is kinematically connected to the zipper fixer. The slider is additionally equipped with a button, a spring, a gear wheel and a toothed rack fastened on the button. The upper cover is made in the form of a cleat and has longitudinal slot in which the button and spring are installed which are kinematically connected to each other. The gear wheel is fastened on the intermediate and is kinematically connected to the toothed rack.
