

The invention relates to recording information on DVD compact discs and can be used for cleaning optical heads for reading out information, mainly from DVD compact discs. The inventive device for cleaning the optical heads for reading out information from DVD compact discs comprises a cleaning compact disc which is provided with one or several cleaning members and an internal zero track containing an introductory information item about said DVD compact disc, a track arranged under the cleaning element and a track containing the records of the program for controlling the displacement of the optical heads for reading out information from the DVD compact discs during cleaning, wherein said track containing the records of the program for controlling the displacement of the optical heads for reading out information from the DVD compact discs during cleaning is arranged between the internal zero track and the track arranged under the cleaning member. Said device makes it possible to increase the efficiency of cleaning of the optical heads for reading information from video (DVD) compact discs.
