

A vehicle-aircraft with turbo-electro-aerodynamic levitation has saloon for placement of pilots and passengers, there on front panel navigation apparatuses for motion on earth and in air is placed, compartment for mechanism of forced effect of initial motion, electro-self-gravitation turbine placed in front part, electro-self-gravitation turbine placed on cut plane near cross line of center, electric motor of motion effect, mechanical motor "Wheel Flywheel" placed in shaft of drive of motion effect, hollow vessel for drive of effect of aerodynamic levitation, this has split doors for control of force of effect of aerodynamic levitation, structure of shaped pallet, aviation motor of low traction for provision of motion in air, with two motors for turn with small force of effect.
