

Drying box has body with rectangular cross section with vertical flat walls. In the body at its height horizontal gas-permeable pallets in rectangular shape are placed, calorifer, ventilator and device of reversing motion of flow of drying agent. Pallets are placed in the body without gap at two opposite sides and with gap with other walls of the body. Between gas permeable pallets Z-like plates are installed, shaped ends of those are placed without gap to walls of the body and straight ends are connected to opposite walls of neighboring pallets.
