

A bottle for preparations contains a reservoir with an aperture in the form of neck, the contact element projecting out and sealing tip, located above the reservoir neck.

The bottle in addition has a rod, closing part of which is conical, and a spring, made as a single whole, H-shaped gag in the section, made as a figure of rotation with a conical aperture in the middle. The external horizontal surface of the gag is concave inside, and the gag is connected as demountable or as one-piece connection with a neck. The rod is inserted into the gag aperture, the spring is placed inside the gag, the contact element is tightly connected to the extended part of the rod outward the gag.
