

A bag with protecting element comprises a face wall, a back one, side walls and a bottom, which are connected between each other, forming the internal volume, internal partitions, an internal decorative covering and outer one, fixed on the above-mentioned walls, outer and internal fastenings, a belt handle for carrying the bag. The protecting element is made as a source of supplying electrical current, a control switch, a sound dynamic and an electric duplex wire, connected therewith, hidden under the internal decorative covering as well as the above-mentioned electrical duplex wire laid wavyly with the parallel arrangement of straight-line areas thereof in the same direction, for example horizontal, on side walls, the face wall, the back one and the bottom of the bag. The bag has an additional similar electrical duplex wire laid also wavyly with parallel arrangement of straight-line areas but in the other direction as regards to the first electrical duplex wire for forming four-sided cells, limited by two layers of the first and second electrical duplex wires on all sides.
