

An installation for forming packets from a film contains a mechanism for unwinding the film, a forming neck, a sleeve-former, jaws for welding longitudinal and transverse joints of a packet, jaws for welding angular joints of a packet as well as bending devices for lateral folds of a packet, packet bottom bending devices and bending device for lower packet joint. The packet bottom bending device is attached to the body of jaw for welding transverse joints of packet. The bending devices for lateral packet folds, jaws for welding angular joints and packet bottom bending devices are fastened in the installation with possibility of displacement in the plane perpendicular to the longitudinal axis of installation. The sleeve-former is made in the form of a central pin with X-shaped blades. The blades are fastened on the pin with possibility of changing the angle between them.
