

A roller briquette press comprises a loading hopper, a prepressing mechanism and two drive rollers with rows of cells. A mechanism for transporting and feeding the mixture is made in the form of a fixed pan mounted over drive and tension drums with a chain with scrapers covering the drums, and elastically installed roller over pan for adjustment of section. The drive drum is mounted movably with possibility of fixing in a predetermined position, and the tension drum is mounted with possibility of displacement in the given direction.
