

A method for human security using a signal transmission medium comprises the following: transmission of a signal from a medium of human coordinate finding through a security agency operator to a fast response group to liquidate a reason for danger origination. As a medium for signal transmission a sensor is used, which is switched on if a danger occurs, coordinates of an object being guarded is supplied to the said sensor. The obtained coordinates are transmitted to receiver using GSM- module at the same time both over SMS and GPRS-channels.
