

A mobile device for washing heating and water supply systems has a vessel with cover and device for control of liquid level connected to control cabinet, compressor and pump-circulation system that comprises a feeding pump, circulation pump, system of dirt removal, heat source. The vessel and the compressor are equipped with bypass valves. As a device for control of liquid level one uses a block of level sensors electrodes of which are fixed in the vessel, as feeding pump one uses a pump with automatic pressure control.
