

A method of disposing combat automatic fire arms of Kalashnikov system of all modifications, in which the arms are packed in boxes / containers, and disposing of the said fire arms is carried by melting in blast / open-hearth furnaces. In the case of presence on the barrel of complex bipods the barrel is further cut in a plane passing through the strut hinge, and said struts are cut into at least two equal parts. Parts of the barrel box cover and the magazine in addition are pressed to change the original shape.
