

Bracket for installation of devices for different purposes on small arms comprises a base for mounting on small arms, a retainer and supporting member with the strip for placing device, which is configured to be connected to the base. The base is made of L-shaped cross-section and has vertically oriented and horizontally oriented shelves. The retainer is designed as a plate having a protrusion on one of its edges, and is equipped with at least one expander screw. The retainer is located at one end of a horizontally oriented base flange with its outer side, so that the latch plate edge, is equipped with a projection which is adjusted with an end edge of a horizontally oriented base shelf and the opposite edge of the retainer plate is rigidly connected to a horizontally oriented shelf base. Expander screw is installed in a threaded hole in the retainer plate to abut a horizontally oriented base shelf. Thus horizontally oriented shelf bases from the opposite end has a hole for accommodating the nuts of the pistol grip, a projection on the latch plate is arranged to cooperate with the magazine latch hole.
